SER 158

Automatic Solvent Extractor

Safe Solid-Liquid Extractor for a Variety
of Applications

SER 158 Solvent AutoExtractor

Solvent extraction with the SER 158 can be performed for extractable matter determination on a wide range of sample matrices either in food and non-food industries (such as pulp, paper, textile, chemical etc...) and for sample preparation. The solid-liquid extraction process removes the soluble components from solids using a liquid solvent. The SER 158 works in accordance to international standards such as AOAC, ISO, EPA, APHA, UNI.

FAST EXTRACTION

The automatic extraction process completes fully unattended analysis according to the Randall method that is five times faster than traditional Soxhlet.
The high-speed heating plates in glass-ceramic ensure fast solvent boiling.

MINIMUM SOLVENT CONSUMPTION

The patent pending titanium condensers guarantee the unparalleled solvent recovery of more than 90% that is collected in cooled recovery tank.

HIGH PRODUCTIVITY & VERSATILITY

The powerful ControlPad is able to control up to 4 SER 158 units (3 or 6 positions) independently allowing to increase the number of units according to throughput requirement.

MAXIMUM SAFETY

- SolventXpress™ ensures zero exposure to solvents
- SafeEnd™ prevents the overheating and burning of soluble matter
- Remote analysis interruption and immediate notifications through VELD Ermes

EASE OF USE

- The SER 158 Series makes hot solvent extraction easy and fast:
- Preset library of methods and possibility to add new ones and mark preferred methods
 - Multilingual support
 - Balance connection for automatic result calculation
 - Barcode reader to reduce risk of errors

SMART INSTRUMENT

The SER 158 is designed to work unattended 24/7 with Load&Go technologies, minimizing necessary operator intervention.
Thanks to VELD Ermes connection is possible to monitor the analysis and be notified, anytime, anywhere.

CONFIGURATIONS

SER 158/3

SER 158/6

SER 158/3
no ControlPad

SER 158/6
no ControlPad

Fully Automatic Extraction Process

The analysis consists of up to 5 steps to ensure a complete sample extraction

1 IMMERSION

The sample is immersed in boiling solvent for an effective defatting action.

2 REMOVING

The level of solvent is automatically lowered below the extraction thimble. Part of the solvent is collected in the recovery tank, the rest continues to flow through the sample.

3 WASHING

The condensed solvent flows over the sample and through the thimble to complete the extraction process.

4 RECOVERY

More than 90% of the solvent is recovered in the internal recovery tank.

5 COOLING

The heaters are switched-off and the cups containing the extracts are automatically lifted to prevent burning of the extracted matter.

VELP ERMES CONNECTION

Connect the SER 158 to the exclusive VELP Ermes Cloud Platform to improve your laboratory experience. The VELP Ermes Cloud Platform connection will unburden you from tedious tasks improving your lab productivity.

- Enhanced analytical and service support resulting in the highest system uptime
- Real time monitor and control of the instrument from PC, smartphone and tablet whenever you want, wherever you are
- Immediate alert and notification with the possibility to stop the instrument for maximum safety
- Regular software updates will guarantee the best performance and new features with just one-click

**MAXIMUM PRODUCTIVITY
AND VERSATILITY**

TIME, ENERGY, MONEY, SPACE SAVING

- TIME SAVING:** Fast solvent addition, easy analysis set-up, one-click start function.
- ENERGY SAVING:** Heaters are independent, limited water consumption.
- MONEY SAVING:** More than 90% solvent recovery and reduced extraction time.
- SPACE SAVING:** Extremely compact footprint saves bench space.

**MONITOR AND
CONTROL
ANYTIME,
ANYWHERE**

The SER 158 can be supplied with or without ControlPad.
All configurations already include a set of accessories that can be used
for the most common industries and applications. Optional accessories
are available on request.

FIELDS OF APPLICATION

The SER 158 Series is ideal for the determination of crude and total fat content and for sample preparation aimed at the extraction of pollutants and contaminants according to the Randall technique.
